iS7

is Dependable Because it Has High Performance and Reliability.

iS7 Feature | Reliability & High Performance

Reliability

Powerful Electric Current Type Sensorless Vector Control

Our iS7 technology includes a competitive and strong low-speed torque control and a speed-precision-driven vector algorithm.

- Speed control range 100:1
- Extremely low torque control capability: 0.1Hz/150% real torque
- Max. torque control capability within the restoration range

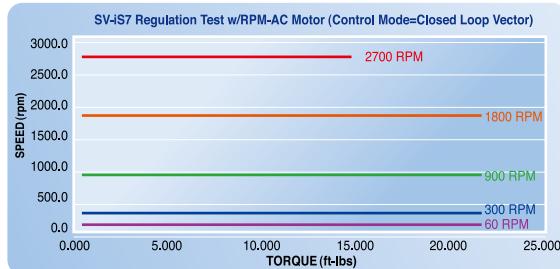

High Performance

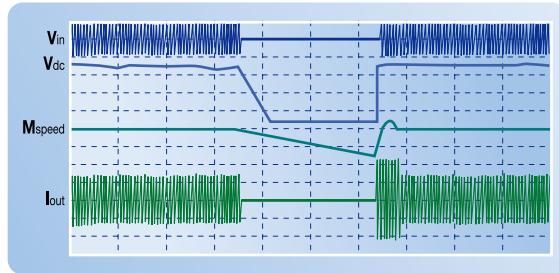

Sensored Vector Realizing Precise Speed/Torque Control

In the entire speed range including zero speed, powerful torque (more than 250%) performance is materialized through receiving Max. 200kHz frequency pulse via encoder-dedicated board.

- Speed control range 1000:1
- Instant Max. torque control capability 250%
- 50Hz speed control response

Ride-Through (LV Trip Delay) for Sudden Power Loss

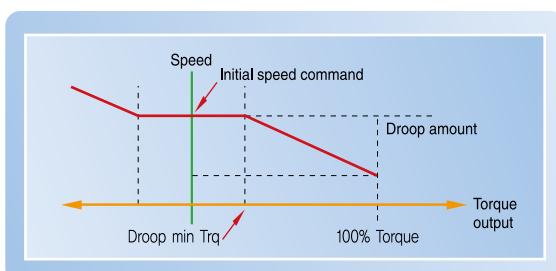

Powerful Performance

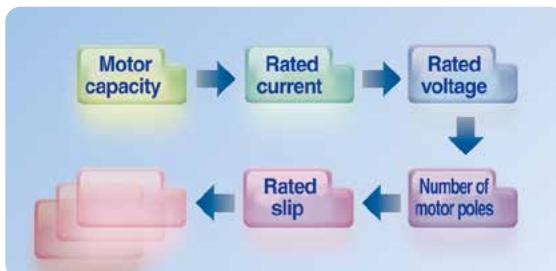

V/F Control, V/F PG, Slip Compensation, Sensorless Vector Control

Automatic Torque Balance Droop Control

Droop control algorithm adjusts changeable torque driven by speed. This algorithm is easily applicable to open loop linking driving and load sharing driving.

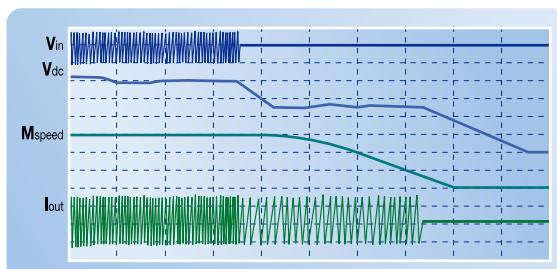

Easy Start Parameter Setting

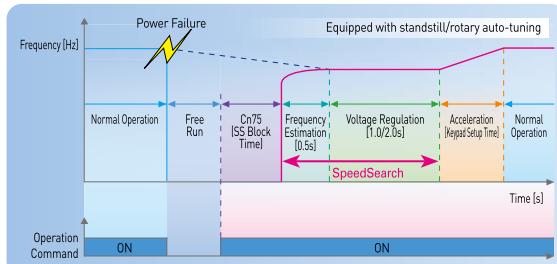

Power and Flux Braking for Maximum Deceleration

Kinetic Energy Buffering (KEB) for a Stable System Stop in Case of Power Loss or Failure

Flying Start Function

Drive capable of quick reliable smooth restarts into bi-directional rotating loads.

Safety Option

The Safety input function meets EN ISO 13849-1 PLd and EN 61508 SIL2 (EN60204-1, stop category 0).

This feature is standard and enables compliance with current safety standards.

^{*1} Motor Applied indicates the maximum capacity applied of a standard 4 pole OTIS-LG motor.^{*2} Rated Capacity: the input capacity of a 200V class is based on 220V and that of a 400V class is based on 440V. The current rating is based on CT current.^{*3} The output of rated current is limited according to the setting of the carrier frequency (CON-04).^{*4} In case of Sensorless-1, you can set the frequency at up to 300Hz by selecting 3, 4 as the control mode (DRV-09 Control Mode).

In case of Sensorless-2, you can set the frequency at up to 120Hz by selecting 3, 4 as the control mode (DRV-09 Control Mode).

^{*5} The maximum output voltage does not go up over the supplied power voltage. You can select the output voltage as you want below the supplied power voltage.

* Non DCR products are provided warranty service when used in CT (Heavy duty) load rating only.
